

Turn browser work into trusted evidence

JShotz records a web workflow as ordered screenshots, then creates shareable PDF or Word evidence without the manual screenshot-and-document assembly cycle.

30 min

illustrative saving per 20-step evidence pack

The problem: QA, support, operations, and delivery teams often need to prove what happened in a browser. Today they re-run the process, take screenshots one by one, paste and label them in a document, and repair gaps when the action, page title, URL, or screenshot sequence does not match.

Where to use JShotz

- + QA and UAT evidence for a completed test flow
- + Support tickets and incident reproduction steps
- + Release validation, sign-off, and audit evidence
- + Customer or internal how-to walkthroughs
- + API-aware defect triage when browser network context matters

Benefits

- + Captures click, scroll, modal, and linked-tab steps in action order
- + Binds each frame to the rendered page title and URL
- + Exports selected frames and notes directly to PDF or Word
- + Supports checkpoints, resumed sessions, and regenerated evidence
- + Reduces missed steps, rework, and ambiguity during reviews

Illustrative time and cost savings				20-step workflow; \$50 fully loaded hourly cost; 48 working weeks	
MANUAL EVIDENCE PACK	WITH JSHOTZ	TIME SAVED	EFFICIENCY GAIN		
45 min	15 min	30 min	67%		
EVIDENCE PACKS PER WEEK		HOURS SAVED PER YEAR		ILLUSTRATIVE ANNUAL VALUE	
2		48		\$2,400	
5		120		\$6,000	
10		240		\$12,000	

Estimate = evidence packs x 0.5 saved hours x 48 weeks x hourly cost.

Planning estimate only. Replace assumptions with your team's measured effort and cost.
