

JShotz Quick Guide

Version 3.11.2

JShotz records your browsing as a series of screenshots and turns them into a PDF — handy for documenting a process, a support case, or a step-by-step walkthrough.

Getting started

- Click the JShotz icon in your toolbar.
- Choose a **Capture source**:
 - **Tab viewport only** — screenshots of the page you're on.
 - **API + Screenshot** — same, plus a table of the page's network calls under each shot.
 - **Screen / window** — share your whole screen, a window, or a tab (the only option that can show DevTools or other apps).
- Click **Start recording**.
- Use the page normally — screenshots are taken automatically as you click and scroll.
- Click **Stop recording**, choose **Yes, keep**, and pick a PDF name. Your files open

automatically when they're ready.

You can change the capture source at any time without stopping the recording.

Updating the extension

Unzip the new JShotz package, load the folder containing `manifest.json` from `chrome://extensions` or `edge://extensions`, and make sure only one JShotz copy is enabled. Then close and reopen any browser tab that was already open during the update before recording. Chrome may retain an **Extension context invalidated** error for an old page script; delete that error card after reopening the tab.

Capturing a screenshot manually

To do this	Do this
Capture right now	Click Capture now in the popup
Capture with the keyboard	Press Ctrl+Alt+Q

Capture a DevTools panel	Open the panel, press Alt+Shift+S
Capture in 5 seconds (time to click into DevTools)	Click Capture in 5s , or press Alt+Shift+D

Getting the whole page in one shot

Turn on "**Whole-page shot for Ctrl+Alt+Q and Capture now**" in settings, then use one of those two actions (or Capture in 5s) to capture the *entire* page — including everything below the fold — without scrolling your screen. Everyday automatic captures (clicks, scrolling) are left as normal single-screen shots so your view is never disturbed.

You may see a brief flicker, and Chrome may show a "started debugging this browser" banner for a moment — both are expected and clear on their own.

Saving a PDF partway through

Click **Export PDF so far** at any point to save everything captured up to that moment as a PDF, without stopping the recording. Keep going afterward — your final PDF at "Stop recording" will still include everything.

Where do my files go?

Everything is saved under your Downloads folder:

```
Downloads/flow-captures/session_<date-time>/
```

This includes your screenshots, the PDF, and a short technical log used only for troubleshooting if something needs a closer look.

Multiple tabs

If the page you're recording opens a new tab (like a sign-in redirect), JShotz follows it automatically. Switching back and forth between tabs keeps capturing wherever you are.

Need help?

If something doesn't look right, note roughly when it happened and what you were doing, and share that along with the screenshot in question.
